# Access capture, routing, and fax from any MFP

AccuRoute integrates with various Multi-Function Peripheral (MFP) device panels. By supporting a comprehensive list of device vendors including HP, Canon, Lexmark, Xerox, and Ricoh, AccuRoute delivers a universal experience for end users.
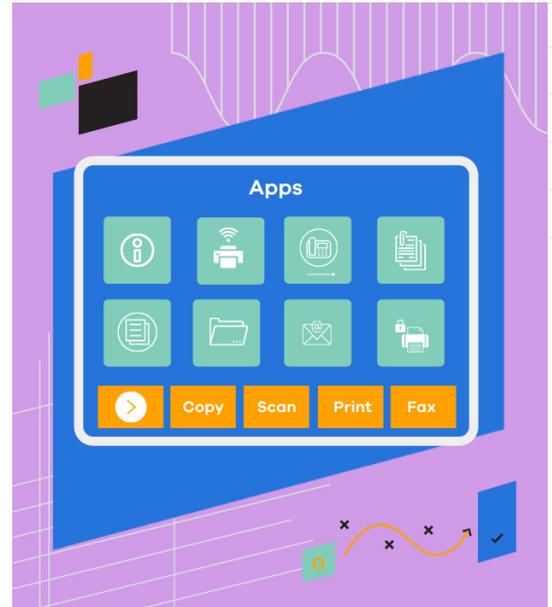

Accelerate work using default buttons.

Default buttons have repeatable user actions tied to them that work the same way for all users.

- Create default buttons for items such as Device Information, MyFiles, Fax, or Routing Sheet

- Invoke user-specific actions such as opening to a user's personal MyFiles location or OneDrive

- Automatically authenticate users through badge integration, PIN numbers, or Active Directory settings

Utilize custom buttons for specific tasks.

Create endless custom sets of rules for processing, sending, indexing, and storing documents in various ways.

- Users can create their own custom button rules to be readily used for themselves, located under the Personal Distributions button

- Administrators can publish custom buttons to appear for only specific users, a subset of users, or for all users by adding it underneath the Public Distributions button
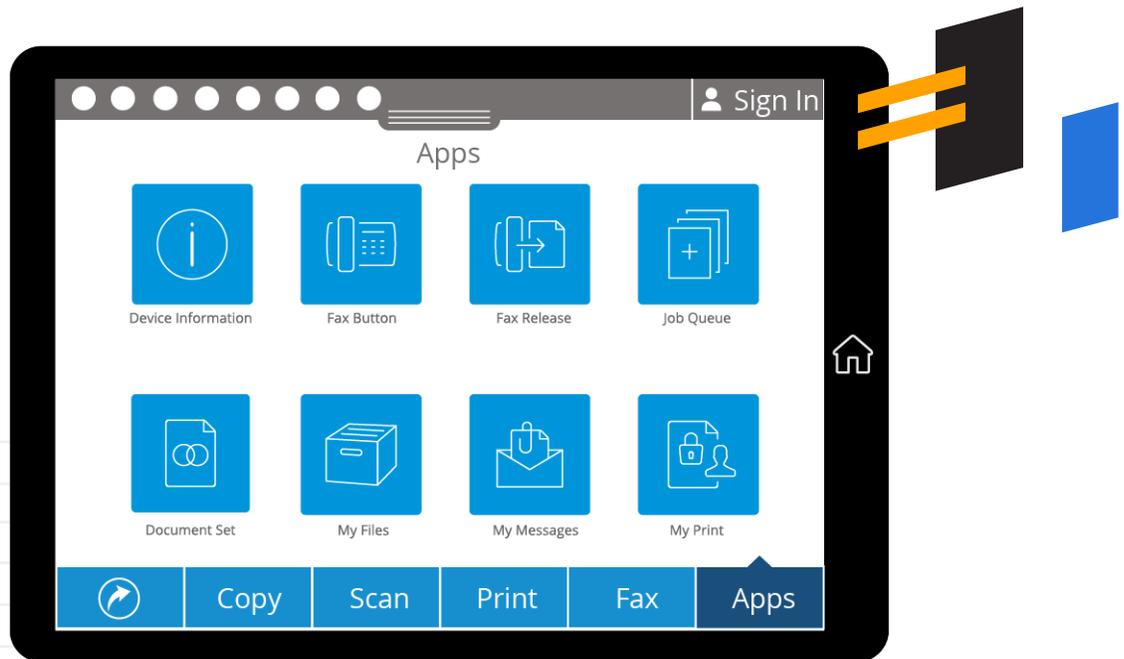

AccuRoute's Universal Device Client (UDC) simplifies rollout and reduces training for even the most complex and disparate business environments.

Data collection at the device

Integration with MFP devices doesn't stop at the button. Much of the power behind a useful experience at the device is providing users the ability to add metadata to be associated with the content. With AccuRoute, administrators can prompt users for specific data that needs to be associated with the document. Administrators can create drop-down pick-lists and can even have different varieties of fields triggered based on user responses.

Users can tie both default and custom buttons to powerful back-end workflows to invoke all the power of AccuRoute. Take advantage of AccuRoute CX to automatically classify and extract data right from the MFP device, removing the need for prompts. AccuRoute CX examines the content of the document to define the document type. Once specific valuable information is defined, AccuRoute CX pulls the relevant data from the identified document type, extracts it, and then sends it to the end destination, such as a Document Management System, CRM, ERP, fax, and email platforms to help users get work done more quickly and securely.
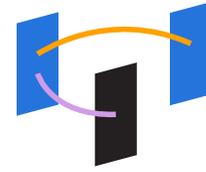

Complementary products
